

NATIONAL CONGRESS OF AMERICAN INDIANS

Resolutions Committee Recommendation

Resolution #: ANC-14-037

Title: Opposing the Introduction of Genetically Engineered Salmon

Comments:

This resolution asks NCAI oppose the introduction of and sale of genetically engineered salmon in the United States if the FDA decides to allow it and requests tribal consultation on the matter before any action by the FDA.

Recommendations:

Edits were made to make the language more universal, less region specific, and to include reference to the trust responsibility.

The Resolution appears to be in order and should be considered with the suggested edits by the Trust Lands, Natural Resources, and Agriculture Subcommittee.

WHEREAS, we, the members of the National Congress of American Indians of the United States, invoking the divine blessing of the Creator upon our efforts and purposes, in order to preserve for ourselves and our descendants the inherent sovereign rights of our Indian nations, rights secured under Indian treaties and agreements with the United States, and all other rights and benefits to which we are entitled under the laws and Constitution of the United States, to enlighten the public toward a better understanding of the Indian people, to preserve Indian cultural values, and otherwise promote the health, safety and welfare of the Indian people, do hereby establish and submit the following resolution; and

WHEREAS, the National Congress of American Indians (NCAI) was established in 1944 and is the oldest and largest national organization of American Indian and Alaska Native tribal governments; and

WHEREAS, salmon is now and has always been central to the culture, religion and society of the Indian people of the Pacific Northwest, and the continued harvest of salmon is critical to maintaining the culture, society and religion of those Indian people; and

WHEREAS, salmon is an integral and important part of the subsistence and diet of the Indian people of the Pacific Northwest and as a result Indian people consume greater amounts of salmon than does the general public resulting in greater risk that Indian people will be adversely affected by any impact of genetically engineered salmon; and

WHEREAS, Indian people engage in salmon harvest as part of their federally protected right to take fish reserved in treaties negotiated between Indian tribes and bands and the United States, and the introduction of genetically engineered salmon will likely adversely affect this treaty right to take fish; and

WHEREAS, should genetically engineered salmon escape into the wild habitat, those genetically engineered salmon will adversely affect wild salmon, salmon upon which Indian people are dependent, by, at a minimum: competing with wild salmon for food and rearing locations, and by inbreeding with wild salmon which could result in the extirpation of wild salmon, and studies to date have not ruled out these two possible adverse impacts of genetically engineered salmon on wild salmon; and

WHEREAS, the United States Food and Drug Administration is now and has been for some years considering an application to allow the introduction and sale of genetically engineered salmon into the United States; and

WHEREAS, given the disproportionate impact genetically engineered salmon would have on the health of Indian people in the Pacific Northwest, their culture and society and the continued meaningful implementation of their treaty right to fish; now

THEREFORE BE IT RESOLVED, that NCAI strongly opposes the United States Food and Drug Administration approving the introduction of genetically engineered salmon into the United States for consumption, research or production; and

BE IT FINALLY RESOLVED, that the United States Food and Drug Administration have meaningful government-to-government consultations pursuant to Executive Order 13175 in regards to this issue.

CERTIFICATION

The foregoing resolution was adopted by the General Assembly at the 2014 Mid-Year Session of the National Congress of American Indians, held at the Dena'ina Civic & Convention Center, June 8-11, 2014 in Anchorage, Alaska, with a quorum present.
