Important Dates and Events Performance Assessment

The Chickasaw Nation - TDE Event Calendar

(PREV) << OCTOBER 2014 >> (NEXT)

| SUNDAY | MONDAY |
|--------|--------|
| 5 | 6 |
| 12 | 13 |
| 19 | 20 |

First think about the program **information** you would like to collect and manage. Then think about the **data** you need to collect to provide the information.

Use **Tribal Program Measures** to manage **INFORMATION**

Use TDE **variables** to collect **DATA**

BUILD MEASURE ALGORITHM

- With the ALGORITHM BUILDER in TDE the tribe can build the formula for each Data Definition (A, B) utilizing the Variables (a,b,c,d) associated with the measure and the basic mathematical operators [+,-,*,/,,(,)]

$$a \times \left[c \div d \right] = A$$

$$b = B$$

TRIBAL MEASURE EXAMPLE

Measure ID: 2402

Measure Code: GIM.217.1033.2402.1116

Measure Short Name: Percent Change in Annual Stomp Dance Attendance from Prior Year

Measure Description: Measure the percent change in attendance at Annual Stomp Dance from Prior Year to Current Year

Actuals | Data Source | Performance Explanation | Steps to Improve

Values entered are: estimated actual

Actual Status: draft final

| DATA DEFINITIONS I'M AT THE RIGHT PAGE | DATA ALGORITHM | ACTUAL VALUES |
|---|----------------|---------------|
| A: Change in attendance at Annual Stomp Dance from Prior Year | b - a | FY2015: 0.00 |
| B: Total in attendance at Annual Stomp Dance in Prior Year | a | 0.00 |

| VARIABLE | DESCRIPTION | VALUE |
|----------|--|--------------|
| a | # in attendance at Annual Stomp Dance from Prior Year | FY2015: 0.00 |
| b | # in attendance at Annual Stomp Dance for Current Year | FY2015: 0.00 |

- We want a measure to track the percent of change in attendance at the Annual Stomp Dance
- To calculate the % we need two variables, one to hold the number in attendance from the Prior Year and one to hold the attendance for the Current Year
- After we create our variables, we then create our measure
- The measure is a “ratio” measure, therefore we create two data definitions to hold the numerator and denominator
- Finally we build the formulas for data definitions using the TDE Algorithm Builder

- Remember to **first** create your **variables**
- **Second**, build your **measure definition**
- **Third**, edit the measure to add **data definitions**
- **Fourth**, build the **measure algorithm**

MEASURE CALCULATION:

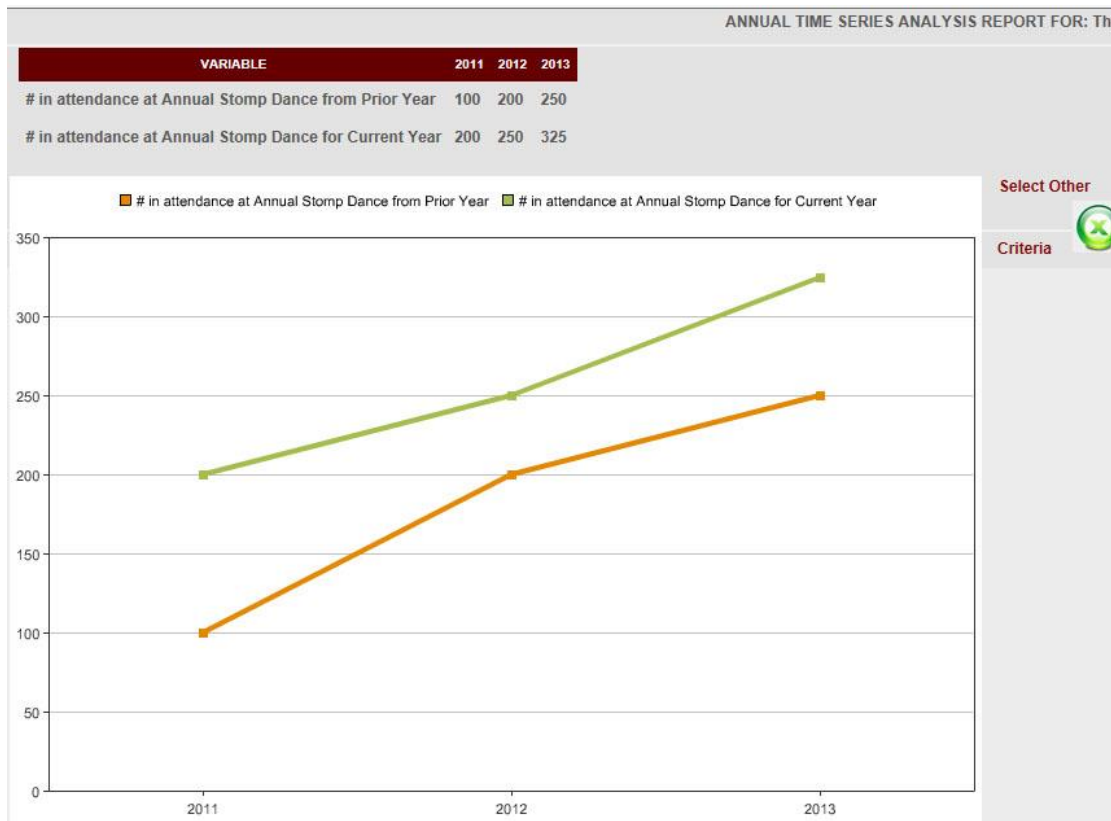

“% CHANGE IN ANNUAL STOMP DANCE ATTENDANCE FROM PRIOR YEAR”

- ⊙ 500 – This year’s attendance (b)
Variable B = b (denominator)
- ⊙ 300 – Last year’s attendance
300 – Last year’s attendance
- ⊙ Variable A = b – a (numerator)
Variable A (b – a) / Variable B (b)
- ⊙ 500 – 300 = 200
(500 – 300) / 300 =
- ⊙ 200 = Change in attendance from last year to this year (Variable A)
200 / 300 = 66.7% “change in annual stomp dance attendance from prior year” (measure name of calculation)

$(b - a) / b = \% \text{ change in annual stomp dance attendance from prior year}$

MULTI-TRIBAL MEASURES AT WORK

- ⦿ The Time Series Report in TDE can enable you to view trend information on any Tribal Program Variable within the system

Click here to export the data in MS Excel format

MULTI TRIBAL MEASURES AT WORK

- TDE produces both the Minimum Data Report and the OJS Monthly Crime Report. The Crime Report uses variables to collect data at the lowest level, while the Minimum Data Report uses a Measure that uses the variables to aggregate the data on the Crime Report

SUCCESS WITH TDE

Today tribes use the Child Abuse and Neglect report in TDE to manage this program by entering the monthly data directly into TDE then generating a PDF in the format required for submission
